

# GEMINI BIO-PRODUCTS

## BUY ONE GET ONE FREE BOVINE SERUM ALBUMIN

*Buy one qualifying product at list price, receive another free!*

**“Mix ’n Match” the following products:**

Product	Cat. #	Price
BSA, Fraction V—Standard Grade	700-100P	\$180/100g
<i>Our standard grade is typically used in bacterial media, enzyme systems, and as a protein base</i>		
BSA, Fraction V—Protease-Free Grade	700-101P	\$280/100g
<i>Often used in diagnostic reagent manufacturing and as a model protein for blood banking reagents</i>		
BSA, Fraction V—Low-Endotoxin Grade	700-102P	\$420/100g
<i>Ideal for most cell culture applications and assays that require low endotoxin levels</i>		
BSA, Fraction V—Serum Replacement Grade	700-104P	\$640/100g
<i>Lipid-enriched and low-endotoxin, this is intended for serum-free or serum-reduced cell culture applications</i>		
BSA, Fraction V—Low IgG Grade	700-105P	\$235/100g
<i>Typically used as a blocking reagent in systems where IgG may interfere with the application</i>		
BSA, Fraction V—Molecular Biology Grade	700-106P	\$380/100g
<i>Free of protease and nuclease activity, it's commonly used in PCR and other molecular biology applications</i>		
BSA, Fraction V—Fatty Acid-Free Grade	700-107P	\$290/100g
<i>Typically used as a blocking reagent in systems where serum fatty acids may interfere with the application</i>		
BSA, Fraction V—Cohn	700-108P	\$245/100g
<i>A modification of the original cold-ethanol plasma fractionation process developed by Edwin Cohn</i>		
BSA, Fraction V—Low-Electrolyte Grade	700-109P	\$195/100g
<i>Used in media, enzyme systems, and as a stabilizer for techniques where low electrolyte levels are critical</i>		
BSA, Fraction V—Solution 30%	700-110	\$120/100mL
<i>Often used for immunodiagnostic assays such as EIA, RIA, and ELISA</i>		
High Polymer BSA, Fraction V—Solution 30%	700-111	\$130/100mL
<i>Suitable for use as a protein stabilizer for antibody and enzyme storage</i>		

**Use Promo Code: BSA963 • Offer Expires March 30, 2018**
